

Case management is a service which provides:

- Evaluation of needs
- Plan of action to address those needs
- Source of information or referral for possible in-home services
- Coordination of community-based, long-term services with different providers
- Follow up to ensure the level of service is adequate and appropriate for needs
- A sense of relief for individuals or family members who may not be familiar with resources or services which can be accessed.
- A link between professionals and their patients or clients. A Case Manager is able to create and coordinate care plans for individuals so it is possible to remain in the home and independent.
